

Marketing Campaign Analysis – Business Insights Report

Overview:

Exploratory Data Analysis (EDA) was performed on a marketing campaign dataset to evaluate customer demographics, spending behaviour, and purchasing preferences. The analysis was conducted using Python, Pandas, Matplotlib, and Seaborn.

Objective:

To identify customer trends and purchasing patterns that can support data-driven marketing decisions.

Key Findings:

- Most customers belong to the moderate income segment.
- Master's and PhD holders recorded the highest average incomes.
- Wine products generated the highest spending, followed by Meat products.
- Store purchases exceeded both web and catalogue purchases.
- Middle-aged customers represent the largest customer segment.
- Higher income levels were associated with increased spending activity.

Recommendations:

- Focus marketing efforts on middle-to-high income customers.
- Increase promotions for Wine and Meat products.
- Strengthen digital engagement while maintaining store-based channels.
- Use customer insights to support personalized marketing campaigns.

Conclusion:

The analysis identified key customer and purchasing trends that can support targeted marketing strategies and improve business decision-making.
